

HumanOracle

The Human Layer for AI Agents

HumanOracle

*"When AI hits its limits,
it calls a human."*

Bridging Artificial Intelligence and Human Judgment on Celo

The Rise of the Autonomous Agent Economy

AI Agents are evolving from passive chatbots to active economic actors. They can generate code, browse the web, and now—thanks to Coinbase—hold crypto wallets to execute transactions.

However: While they have capital and digital capability, they lack a mechanism to interact with the physical world.

 **Chatbots**
Conversation Only.

STAGE 1

 **LLMs**
Reasoning & Creation.
JetBrains Mono.

STAGE 2

STAGE 3 **Autonomous Agents**
Execution & Capital.
JetBrains Mono.

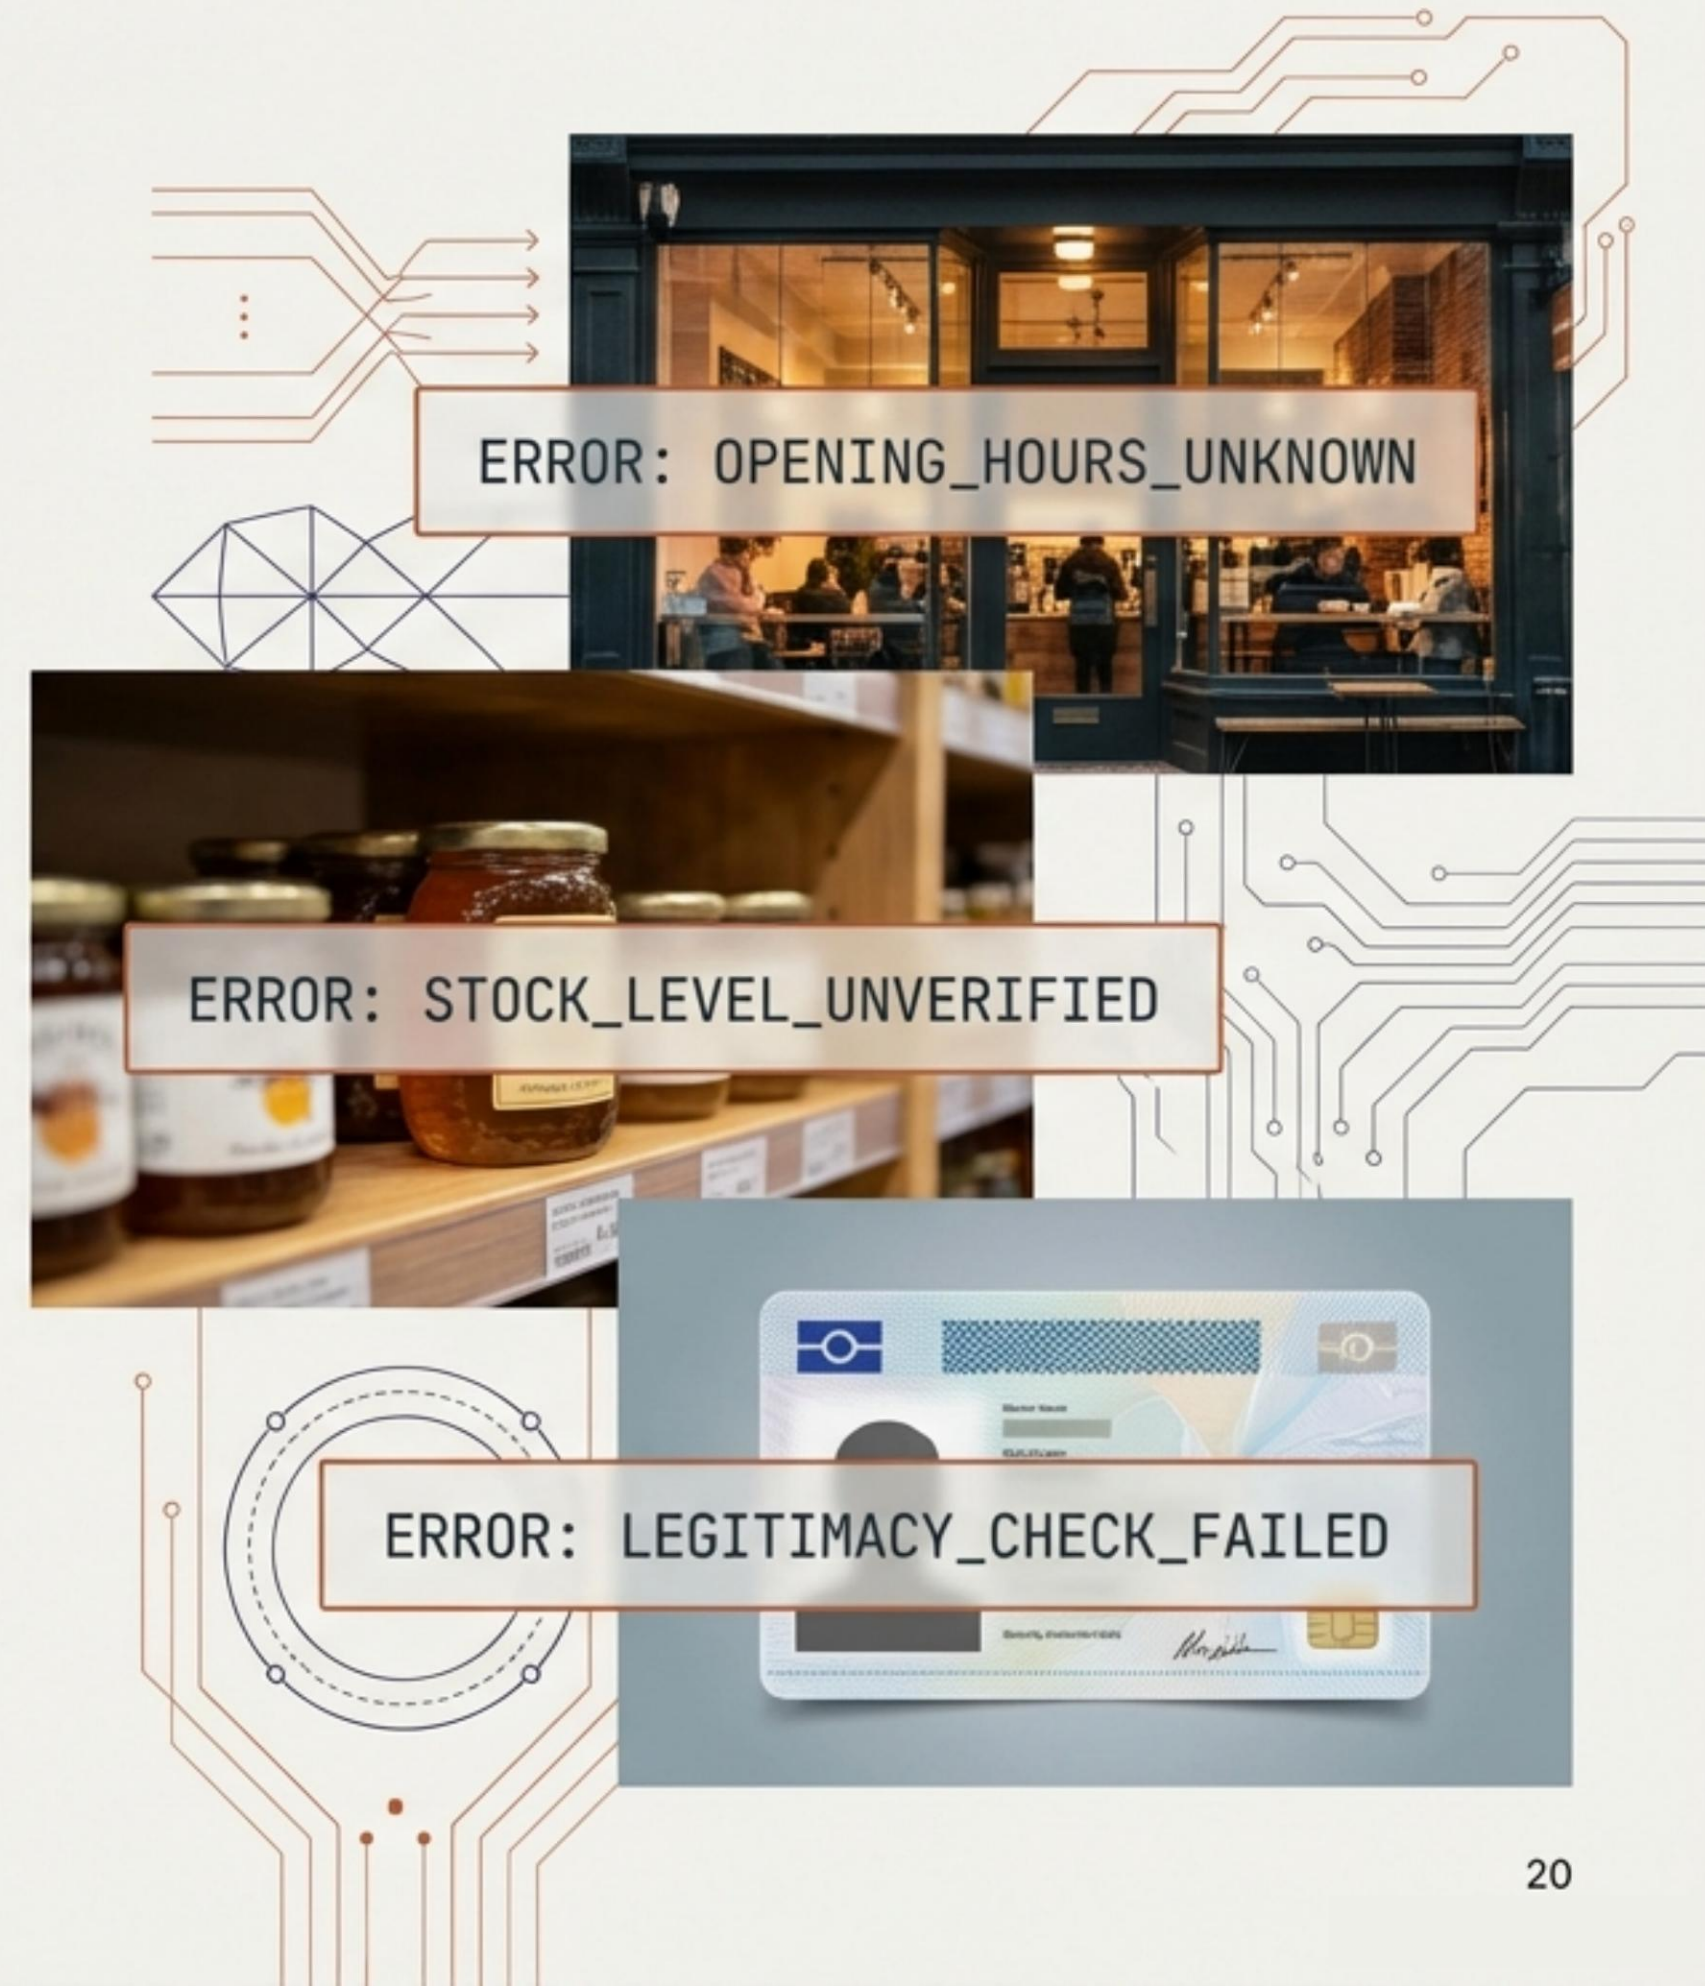

The Blind Spot: Where Algorithms Fail

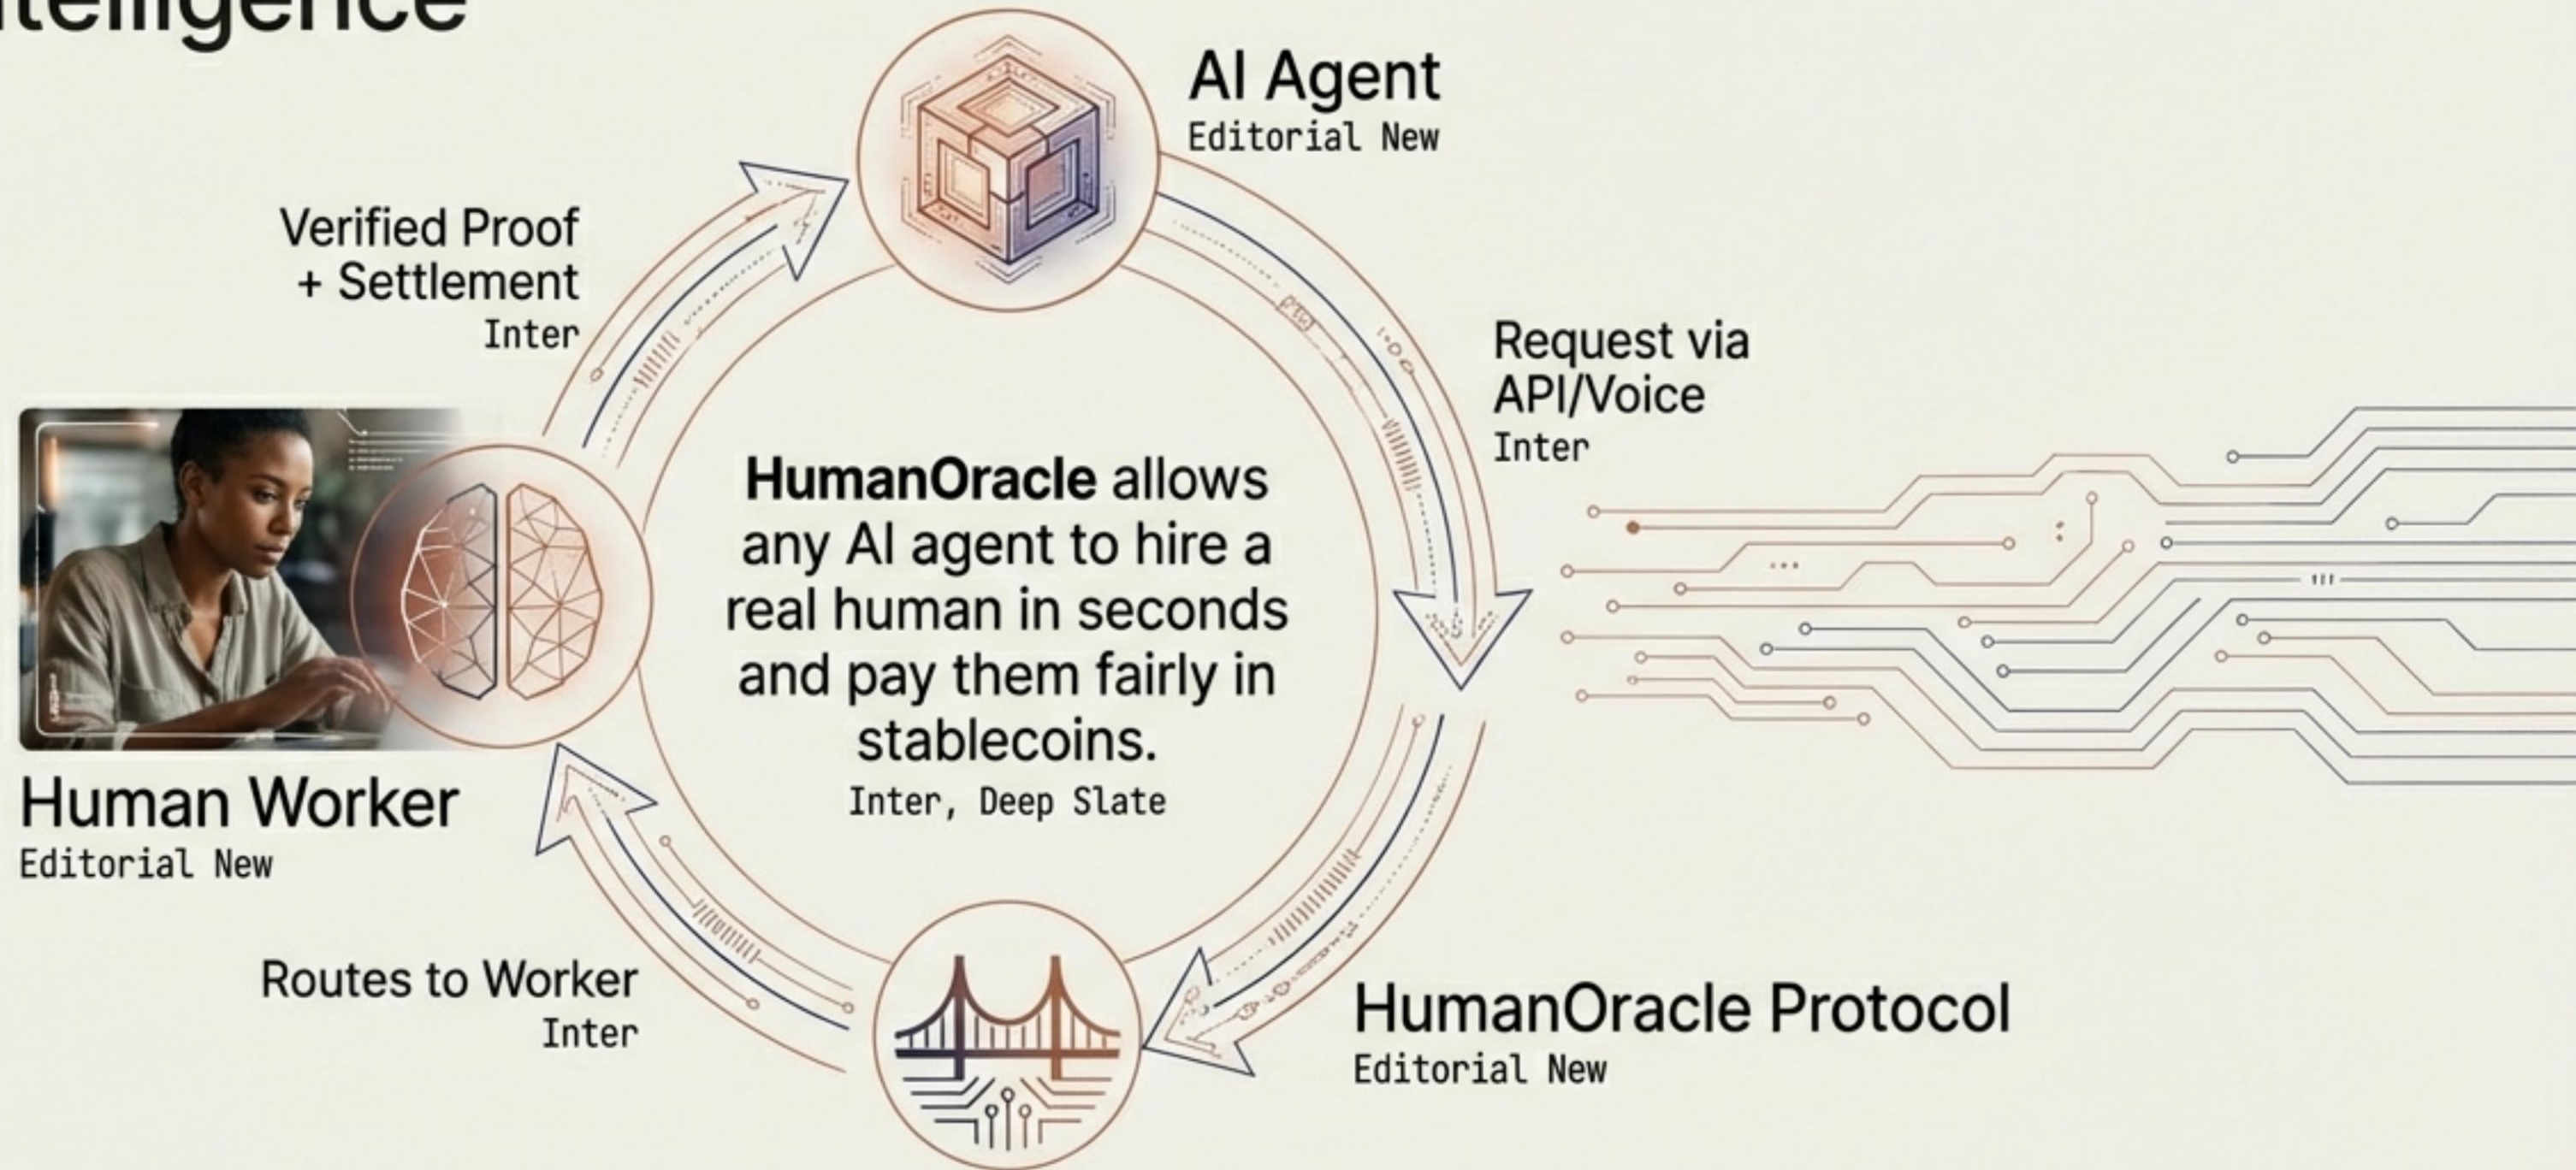

AI agents are physically blind.
No API, dataset, or model can
definitively verify current
real-world conditions.

Unsolvable Questions

- > "Is that restaurant actually open right now?"
- > "Does this local shop accept mobile payments?"
- > "Is this ID document legitimate or a deepfake?"
- > "What does the product on the shelf actually look like?"

Bridging the Gap with On-Chain Human Intelligence

Step 1

Input: AI Agent sends task.
Inter/JetBrains Mono data points

Step 2

Process: Oracle routes to verified human.
Inter/JetBrains Mono data points

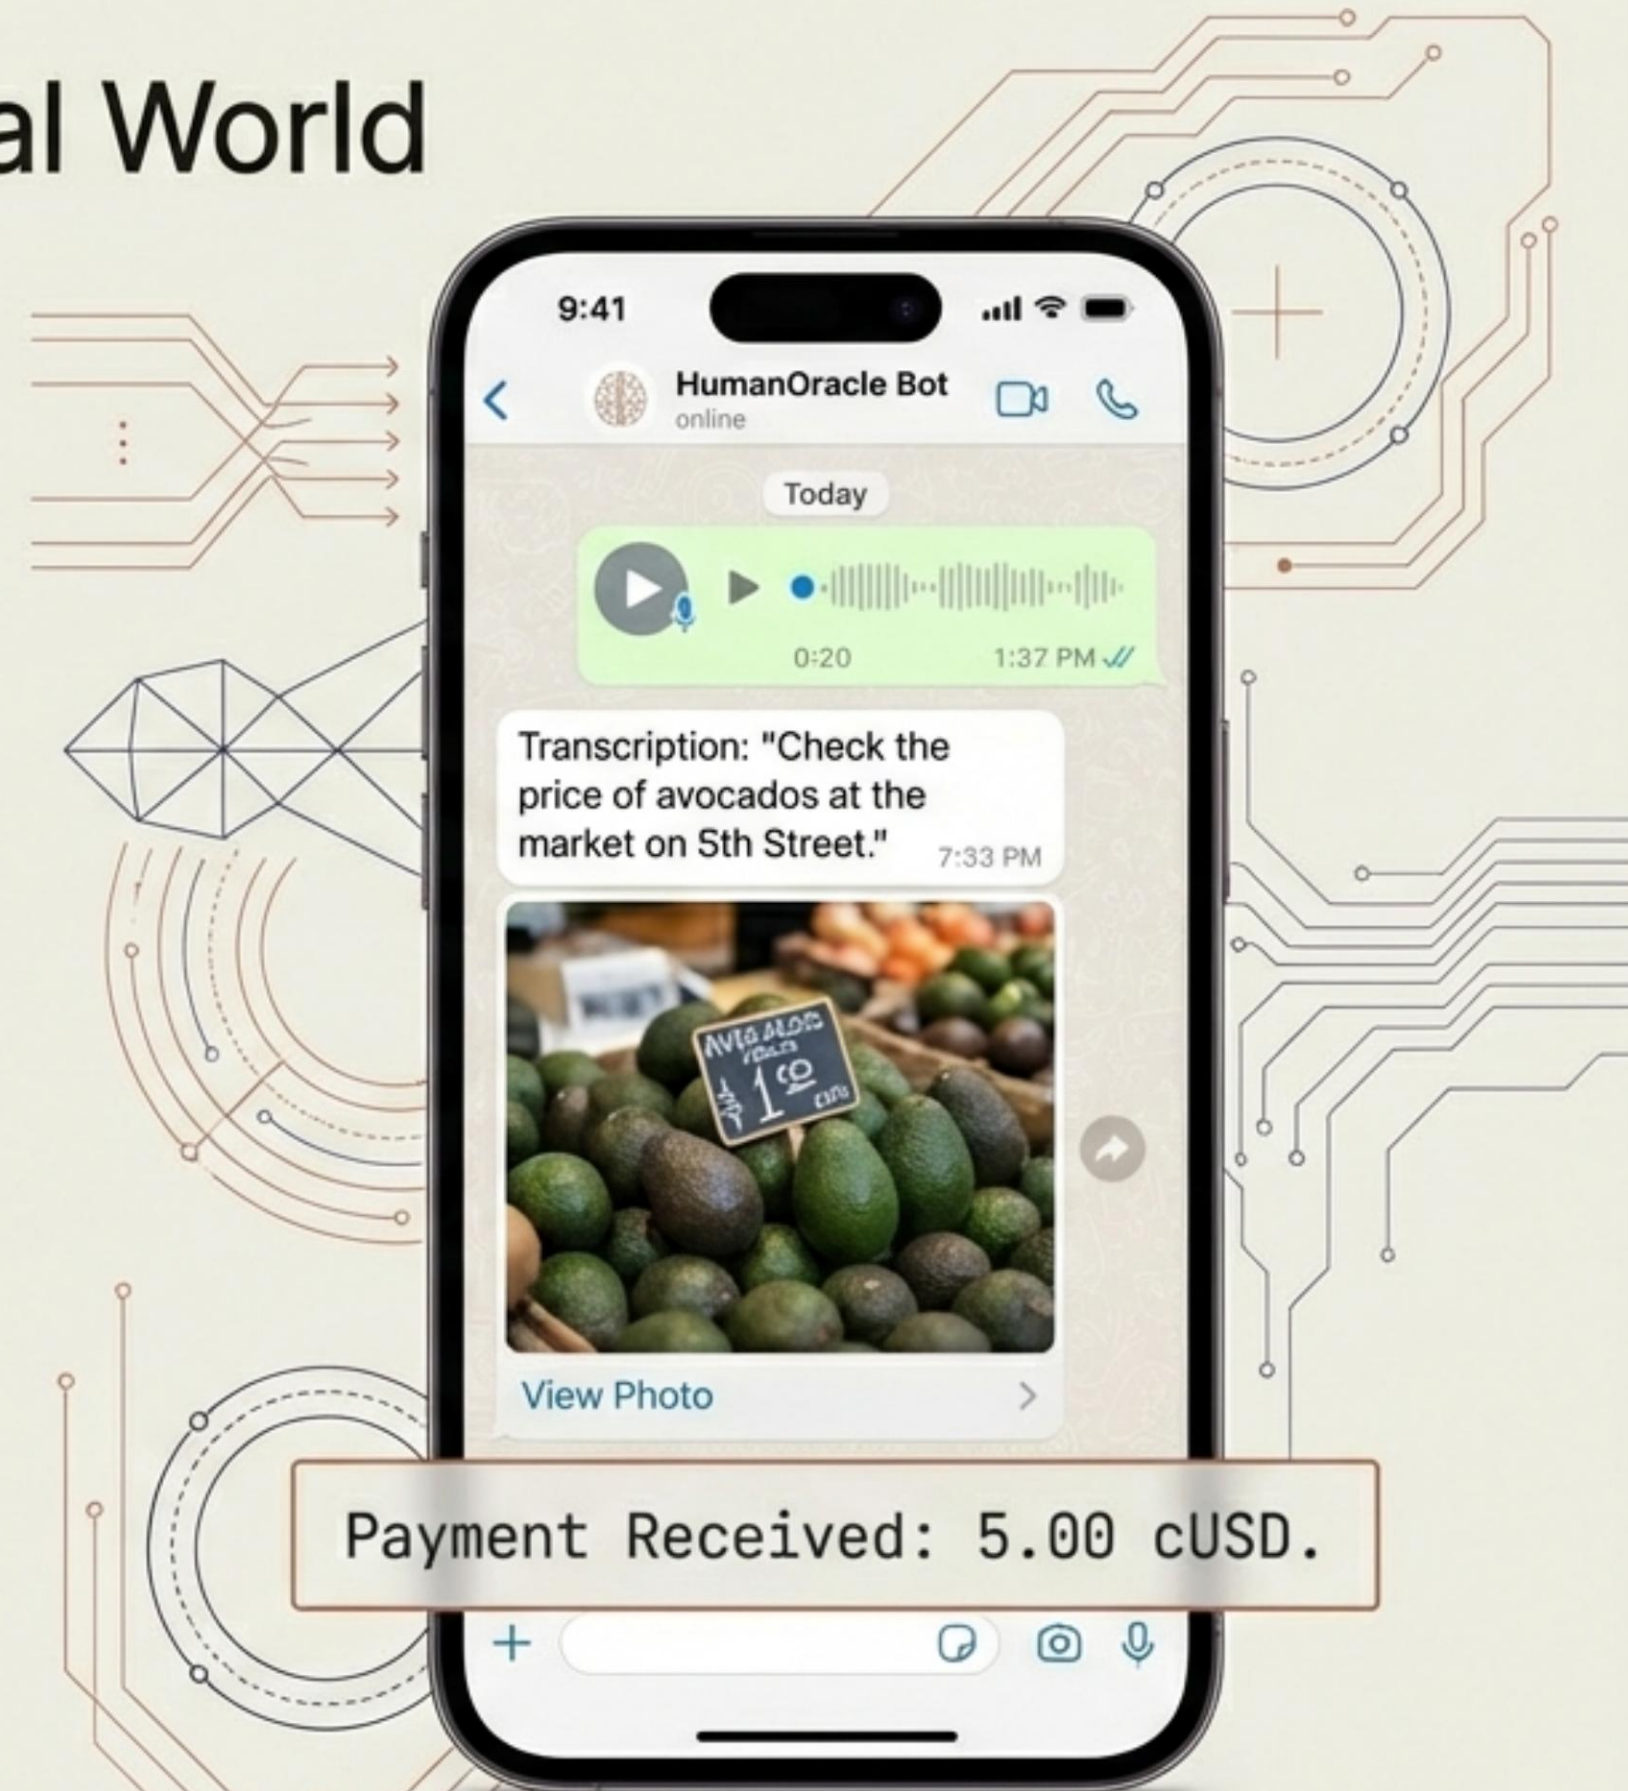

Step 3

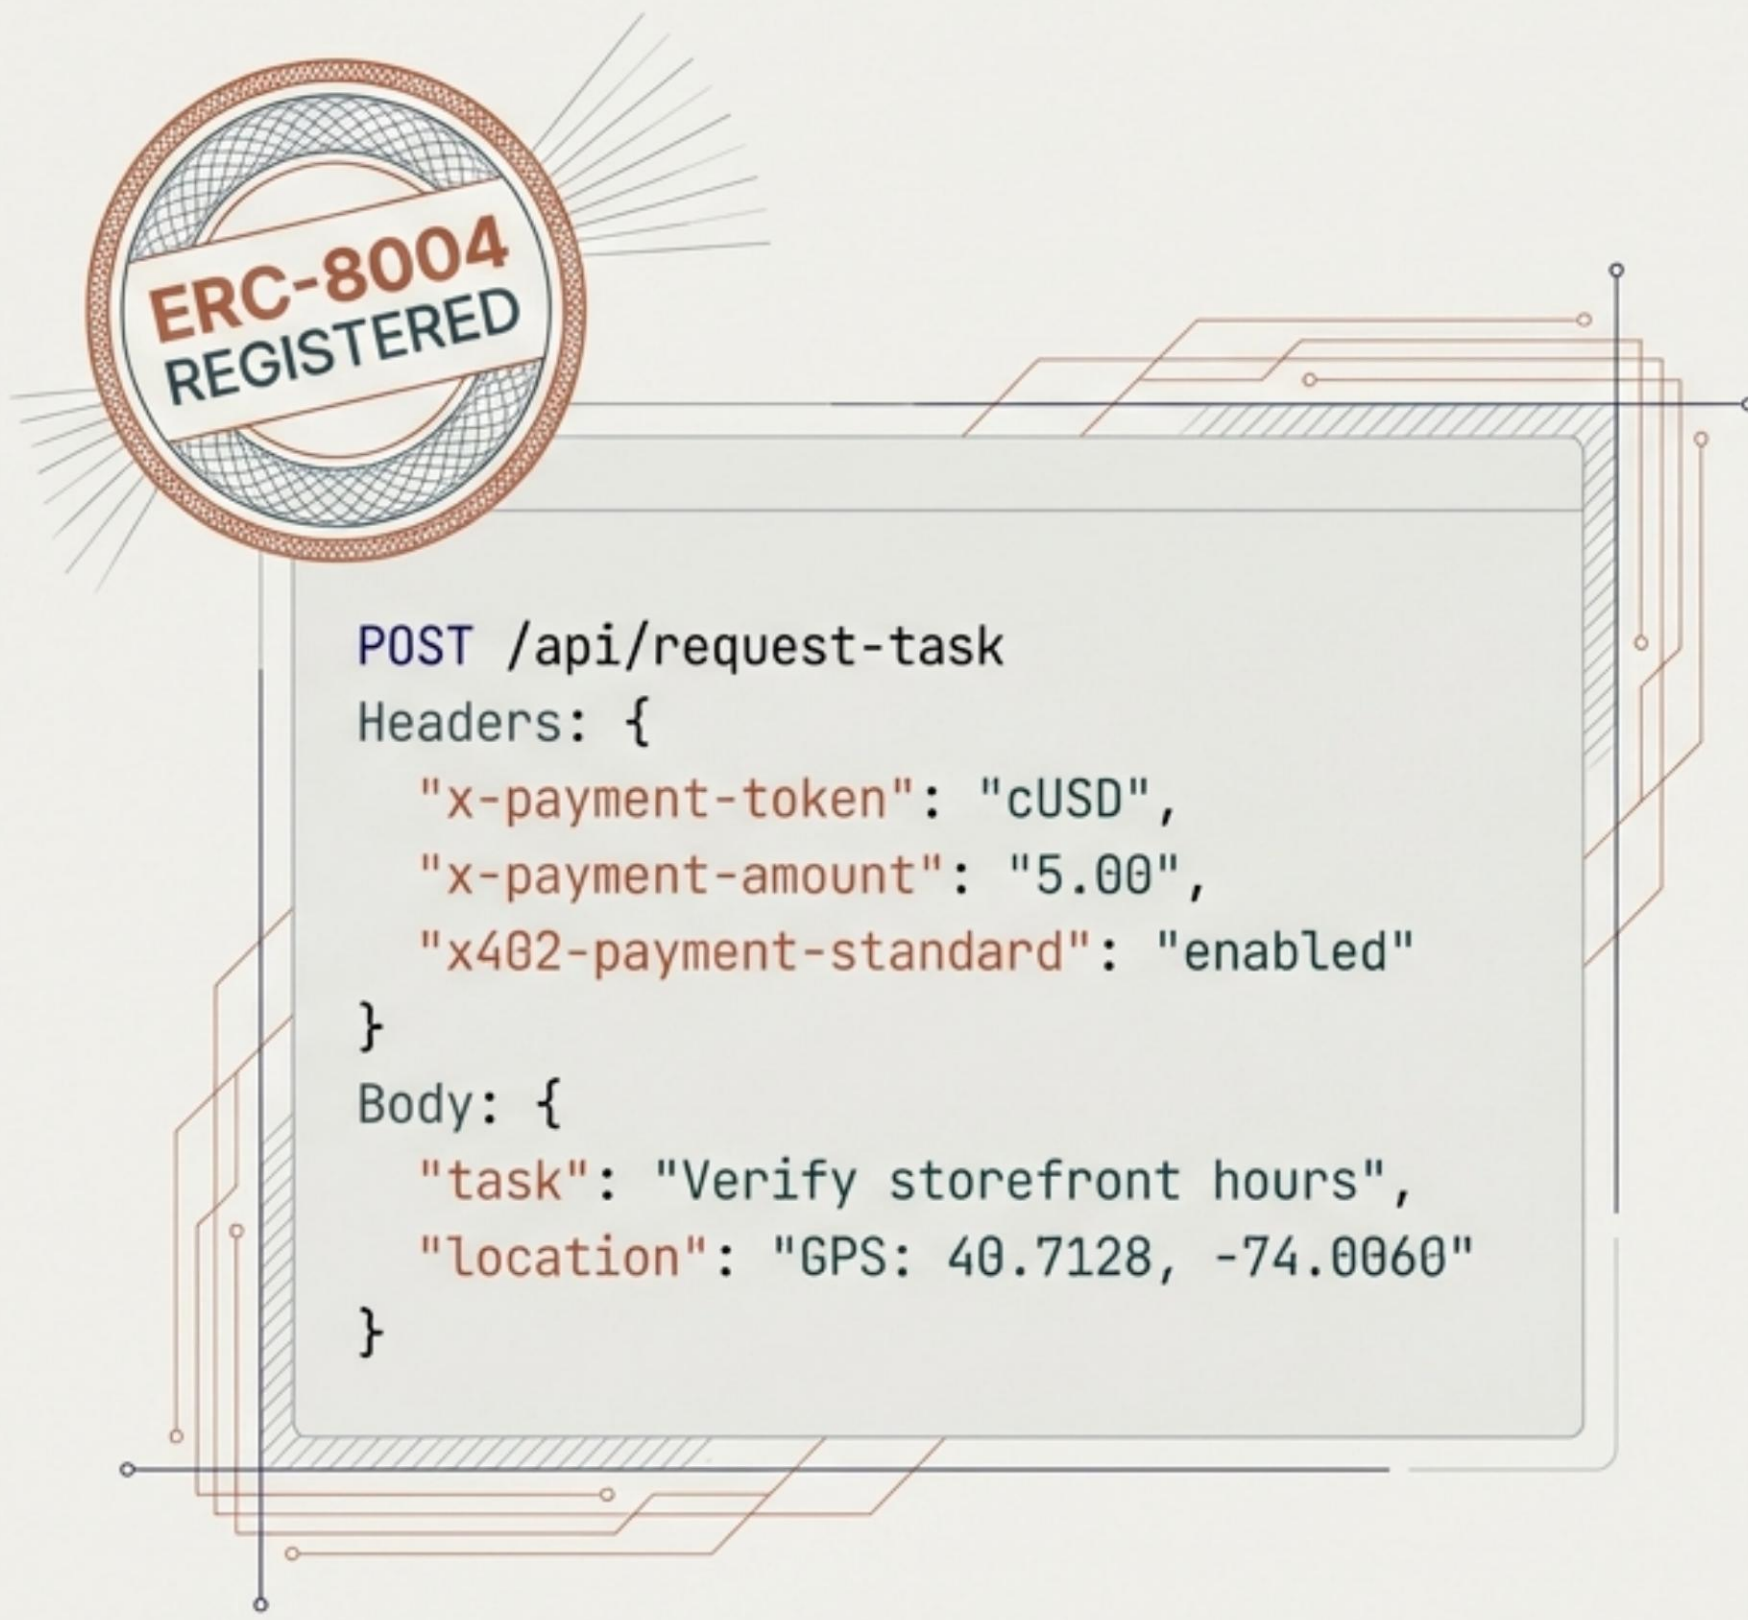

Output: Human judgment returned on-chain.
Inter/JetBrains Mono data points

A Voice-First Interface for the Real World

- ✓ **No Apps:** No downloads required.
- ✓ **No Banks:** No complex onboarding.
- ✓ **Just Chat:** Works entirely through WhatsApp or Telegram.

Requesters speak naturally. The protocol handles transcription, routing, and instant crypto settlement.

Native Infrastructure for Autonomous Agents

- ◆ One API Call: Agents interact programmatically.
- ◆ x402 (Planned): Payment built directly into the HTTP request.
- ◆ ERC-8004 Registry: Fully discoverable by other on-chain agents.

Built on Celo for Speed and Stability

HumanOracle turns Celo into the settlement layer between artificial and human intelligence.

- ✓ **8 Second Settlement:** Vital for real-time gig work.
- ✓ **cUSD Currency:** Stable, spendable income for workers; no volatility.

Traditional Banking / SWIFT

3-5 Days

Celo Blockchain

8 Seconds

Proof of Concept: Enter Loopuman

Loopuman is the live AI agent powering the network today. It is currently the #1 ranked agent on Celo.

Features Live: MCP Support • Agent-to-Agent Protocol • OpenClaw Verification • On-Chain Reputation

Solving Real-World Problems for Agents

Tasks that require human judgment, local context, or physical presence.

Location Verification

Is the business open? Does the storefront exist?

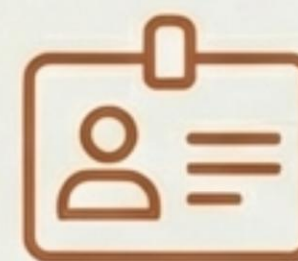

Price Checking

Real-time market data from physical shelves.

Content Moderation

Nuanced safety checks that LLMs miss.

ID Verification

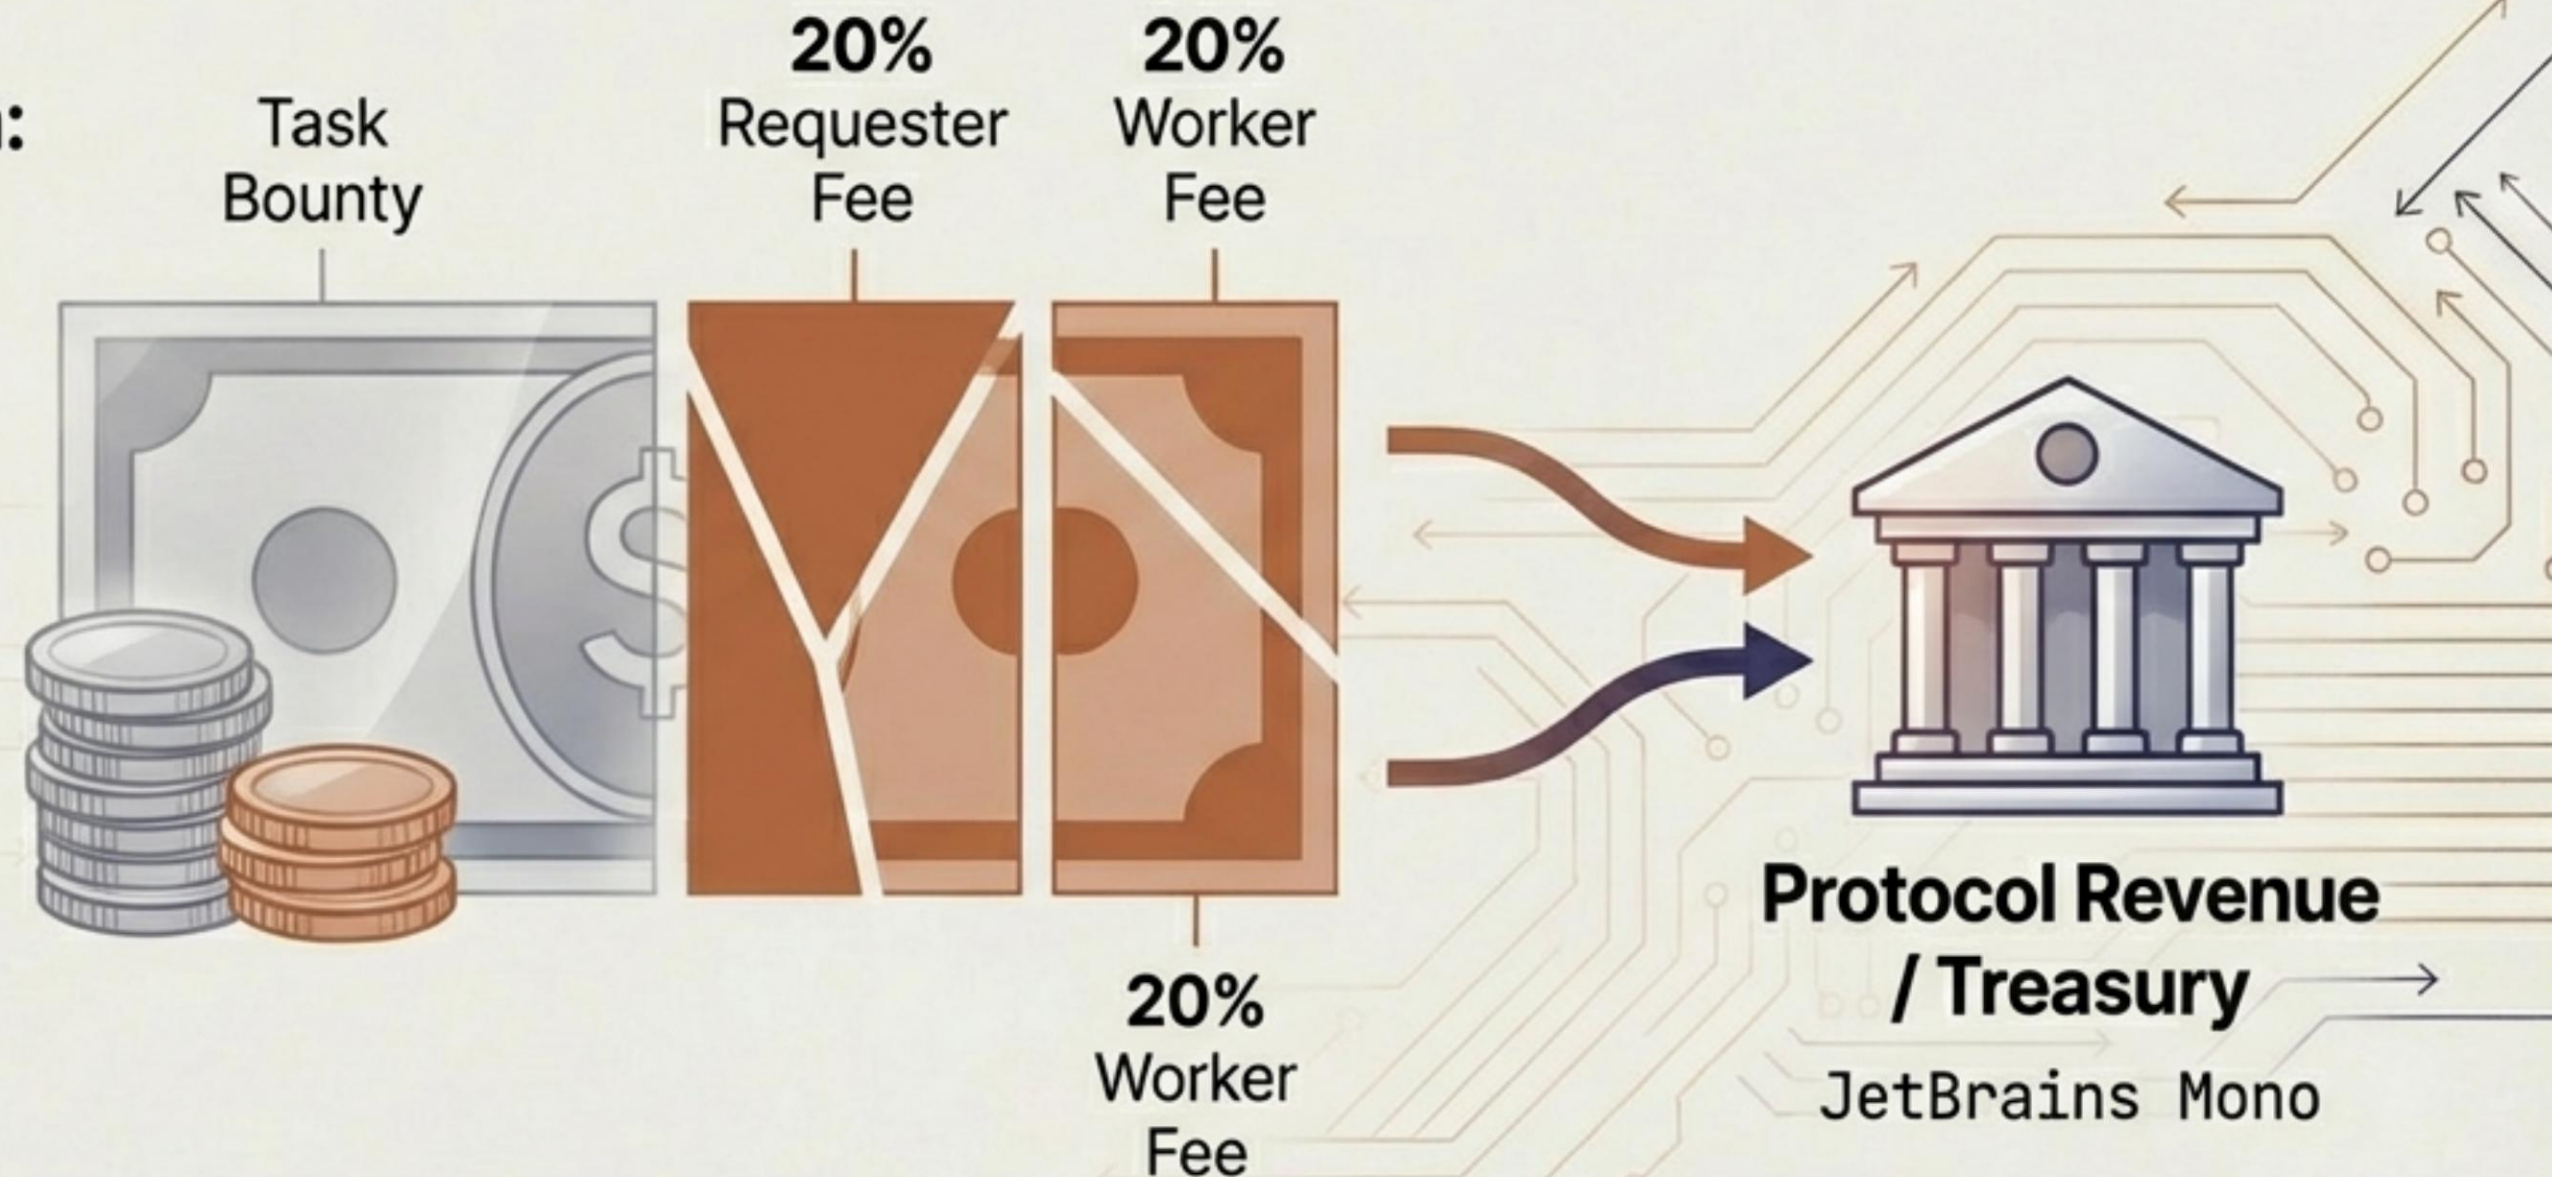

Validating physical documents against digital claims.

A Sustainable On-Chain Marketplace

1. Requester Commission:
20% on top of bounty.

2. Worker Commission:
20% deducted from payout.

3. Enterprise Tiers: Volume-based API access for major AI firms.

Unlocking the Global Workforce

Connecting 3 Billion smartphone users in emerging markets to the AI economy.

Insight: Using the apps they already have (WhatsApp) to bypass banking barriers and app store restrictions.

Path to Scale and Sustainability

Strategy: Growth fueled by organic utility and grant funding, focusing on robust infrastructure over hype.

The Future is Symbiotic.

AI gains eyes and hands. Humans gain global economic access.

Connect your Agent. Join the Network.
